Experienced Backend Developer with 5+ years of expertise in designing, developing, and deploying high-performance software solutions. Currently working at EPAM Systems, where I have had the opportunity to deliver scalable, enterprise-grade applications for global clients across industries.

EXPERIENCE

EPAM, Remote Colombia — *Software Engineer*

FEB 2025 - PRESENT

- Life Sciences project to integrate Organization internal services with Salesforce to enable orders management for Cancer detection blood tests, using for this purpose Java(Springboot), gRPC, Kafka and AWS
- Working for Oracle Health Project, as a Backend Engineer using Java (Micronaut) and Oracle Cloud Infrastructure.
- Participating in the API building for the Patients Portal.
- Implementing integrations with OCI AI services.

Mercado Libre, Remote Colombia — *Software Engineer*

JUN 2021 - FEB 2025

- Working for Places team which provides technical solutions for connecting to the Mercado Libre logistic net delivery and pickup points.
- Design and develop high-performance, scalable backend systems using Java and related technologies such as Spring Boot and Hibernate.
- Implement RESTful APIs for data access and manipulation.
- Collaborate with cross-functional teams to design and implement software solutions.
- Use agile development methodologies and tools such as JIRA for project management.
- Develop solutions for logistic systems using different synchronous and asynchronous approaches.

Ejército de Colombia, Colombia— *ARMY NCO CI*

MAR 2013 - MAY 2021

- Conduct investigations into potential threats to military security, such as espionage or sabotage, and gather evidence to support legal action against suspected individuals or organizations.
- Develop and maintain relationships with sources and informants to obtain valuable counterintelligence information.

SKILLS

Analytical thinking
Problem solving
Java
Spring Boot
Python
SQL- NoSQL
Message brokers
Prompt Engineering

CERTIFICATIONS AND COURSES

AWS Certified AI Practitioner
AWS Certified Developer Associate
Generative AI Leader (Google)
OCI Foundations Associate (Oracle)
OCI Data Foundations Associate (Oracle)
OCI AI Foundations Associate (Oracle)
Django for Everybody Specialization (University of Michigan)
Java for Android (Vanderbilt University)
Python For Everyone Specialization (University of Michigan)
Machine Learning for All (University of London)

- Conduct background investigations and security screenings of military personnel, contractors, and other individuals with access to sensitive information or facilities.
- Provide advice and support to military commanders and decision-makers on security matters, including risk assessments and threat mitigation strategies.

EDUCATION

Politécnico Grancolombiano, Bogotá Colombia — *Master in Software Architecture*

2025 - PRESENT

Master's degree in Software Architecture

Politécnico Grancolombiano, Bogotá Colombia — *Software Engineer*

2017 - 2021

Bachelor degree in Software Engineering

LANGUAGES

English - advance

Portuguese - intermediate

Italian- elementary

Spanish - native

PROJECTS

CancerGuard— *A Salesforce integration project connecting internal company services to enable comprehensive order management for cancer diagnostic tests*

The system allows end-to-end management of blood sample shipments from collection points to company laboratories.

Sellers Communications— *Provide information for users of cross docking - drop off logistics*

With this solution our team developed an application whose main responsibility was to inform about different situations of the shipping points where sellers with xd-drop off logistics used to ship their products to buyers of Mercado Libre.

GMV api— *antifraud application*

This application was responsible to inform the transportation teams when a facility where sellers ship their products was exceeding its threshold of money in order to schedule package collection and avoid the loss of high value products and avoid the inbound of new packages from the scanning application .

Schedule events api— *Enable a system to operators of shipping points to schedule closings.*

This project enabled the feature to schedule closings when operators of shipping points wanted to go on vacations or any for personal reason, and this feature was integrated to Sellers Communications application to inform about the closing to sellers which ship their products in the shipping point reducing NPS of sellers using this logistic type.

Delivery Point Shopping Cart— *Enables adding of several products in the marketplace for buyers and receives them in a delivery point.*

With this feature buyers of Mercado Libre were able to unify their purchases of different sellers in one shopping cart and receive all of them in a delivery point of Meli, saving shipping costs.
